Video length: 9:14

## **Expected Benefits**

Increased knowledge of the health effects of energy drinks.

#### **Evidence Base**

#### Expert Review\*:

The video was developed by the Australian Broadcasting Corporation (ABC) and includes input from academic experts. It has a high production quality and uses animation to present complex information about energy drinks in an engaging and easy to understand way. The video includes interviews with young Australians to increase relevance to students.

As some of the people being interviewed discuss how many young people consume energy drinks, it is important to be aware of the potential for normalisation. Teachers could include a myth busting conversation about how many young people are actually using energy drinks. The National Secondary Students' Diet and Activity (NaSSDA) survey found that in 2018, 7% of Australian secondary school students consumed energy drinks weekly, and 25% had ever consumed an energy drink.
