

Drug and Alcohol Information
Get informed, stay smart, stay safe

Recommended program 

SHAHRP: School Health and Alcohol Harm Reduction Project

Evidence ratings:

This resource is supported by multiple published studies. See our Help/Q&A section for more details.

Year: Year 7–8, Year 9–10

Targeted Drugs: Alcohol

Tags: harm minimisation, skills-based approach, Portuguese language version

Time Allocated: 7 lessons or more

Links to National Curriculum:

 Curriculum Mapping Document for SHAHRP

Available

The SHAHRP program is managed by the National Drug Research Institute at Curtin University.

Click below to be directed to the National Drug Research Institute website for information on accessing the program.

[Access School Health and Alcohol Harm Reduction Project](#)

Developers

National Drug Research Institute, Curtin University.

Format

Conducted in classrooms over two years (teacher administered):

- Phase 1 (Year 8): 8 × 60-minute lessons
- Phase 2 (Year 9): 5 × 50-minute lessons and a DVD.

Training: Two days of teacher training are ideal prior to each phase.

Summary

SHAHRP is a classroom based program aimed at reducing alcohol-related harm and risky consumption. It is designed to be implemented at a time when prevalence data indicates that young people are starting to experiment with alcohol. The SHAHRP activities incorporate various strategies for interaction including delivery of utility information; skill rehearsal; individual and small group decision making; and discussions based on scenarios suggested by students, with an emphasis on identifying alcohol-related harm and strategies to reduce harm. Interactive involvement is emphasised, with two-thirds of activities being primarily interactive and another 15% requiring some interaction between students.

The SHAHRP program was developed with students and teachers and reflects the life experiences of young people, while also fitting well within the school curriculum. The program is culturally adaptable and behavioural results have been replicated in Northern Ireland and in Brazil providing strong proof of evidence.

Expected Benefits

Studies that have tested this resource (see sources below) have found evidence for the following benefits:

- Reduced alcohol consumption
- Delayed and reduced rate of growth in alcohol use
- Reduced binge-drinking
- Reduced alcohol-related harms
- Increased alcohol knowledge
- Safer alcohol-related attitudes.

Evidence Base

Benefits of the SHAHRP program have been demonstrated in multiple trials conducted in Australia, Northern Ireland, and Brazil. The most relevant studies are listed below, for a full list of publications, please visit the National Drug Research Institute website. The SHAHRP program has also been supported by the National Centre for Education and Training on Addiction, more information below.
